Correction to: *Scientific Reports* <https://doi.org/10.1038/s41598-026-42759-7>, published online 13 March 2026

The original version of this Article contained an error in the Abstract, where it was incorrectly implied that 60 people were sampled.

As a result,

“Electroencephalographic (EEG) and electrocardiographic (ECG) signals were simultaneously recorded from 30 human adult pairs while (1) playing a video game round against each other, (2) taking a nap, (3) reporting dreams and/or thoughts, and (4) playing another round.”

now reads:

“Electroencephalographic (EEG) and electrocardiographic (ECG) signals were simultaneously recorded from 30 human adults paired while (1) playing a video game round against each other, (2) taking a nap, (3) reporting dreams and/or thoughts, and (4) playing another round.”

In addition, there was an error in the Materials and methods section under the subheading ‘Statistical analyses’, where it was incorrectly implied that p-values less than 0.05 were considered marginally significant.

As a result,

“For the a priori comparisons, marginally significant results were observed, defined as those with p-value less than 0.1.”

now reads:

“For the a priori comparisons, marginally significant results were observed, defined as those with p-value between 0.05 and 0.1.”

The original Article has been corrected.
